

Fostering Peer-to-Peer Learning with Technology

Panel Questions

1. To start us off and give our audience a bit of context, could each of you take about five minutes to briefly describe the current state of peer-to-peer learning in your courses?
2. What made you decide to incorporate peer-to-peer learning in your class? What are the benefits compared to more traditional teaching methods?
3. What practical advice would you give someone who is just starting out with peer-to-peer learning for the first time?
4. What role does technology play in facilitating your peer-to-peer activities? Can you share some best practices?
5. We know that one of the huge benefits of collaboration is that it fosters the sharing of diverse perspectives. But that can't just happen in a vacuum, so I'm curious, what are some best practices for creating a positive and inclusive learning environment for your peer-to-peer classes?
6. Ok, and this is just sort of a bonus question, but I know we have had some conversations about Chat GPT and other AI, especially how it is impacting teaching. Do you think there is a way you could use technology like in peer-to-peer learning?
