Using Digital Tools to Encourage Human Connection
with Justin Shaffer & Suzanne McCormack
Feb. 20 @ 12PM ET

With online homework, hybrid classrooms, and virtual lessons it can be a challenge to feel connected to your students. But technology doesn't have to divide you! Join this webinar to hear how our panel of faculty advocates use digital tools to feel closer to their students than ever.

1. Before we dive in, let's set the stage a little bit. What course do you teach? What is your class environment? Are you in person? Fully online? Some combination of both? How many students are you typically teaching at once?
2. What technology have you used to really connect with your students? Is there anything you tried that bombed? Anything that you think works especially well?
3. Ok, so let's talk about the elephant in the room. I think everyone has been hearing a lot about Chat GPT and other AI software lately. How are you approaching this in your classroom? Do you have any suggestions for ways to use it as a tool to enhance learning?
4. How have you found that your class has changed when you're able to use technology to connect with students more?
5. If you could give advice to instructors looking to use technology to connect more with students, what would that advice be?
